JAPA[®] XL Split

EN

Japa® XL-Split is a professional log splitter fulfilling the latest safety requirements in European legislation. With this machine you can process your firewood quickly and easily without heavy lifting. Japa® XL split is also a perfect match to work next to a firewood processor to process oversized timber. With power taken from external hydraulics the machine is always equipped with hydraulic log lifter and hydraulic adjustment for the splitting knife. The hydraulic log lifter enables easy handling and processing of logs up to 80 cm in diameter and 1 meter in length for a single operator.

This all new product has a robust splitting table that prevents wood from falling to the ground during or after the splitting or re-splitting process. The machine is equipped with a hookaroon, which helps you to handle and turn large pieces of wood, both on the ground and on the splitting table. The splitting table enables piling up of the finished firewood, from an ergonomic working height after splitting.

| TECHNICAL SPECIFICATIONS | | TRH | TR | E | BE |
|--|--------------------------------|-------------|----|---|----|
| JAPA® XL Split | HYDRAULICS | | | | |
| | Hydraulic tank volume (liter) | - | | | |
| | Hydraulic oil flow (liter/min) | max 60l/min | | | |
| | Max pressure | 200 bar | | | |
